INTRODUCTION TO THE USAS CATEGORY SYSTEM

SEMANTIC TAGS

The semantic tags show semantic fields which group together word senses that are related by virtue of their being connected at some level of generality with the same mental concept. The groups include not only synonyms and antonyms but also hypernyms and hyponyms. Currently, the lexicon contains nearly 37,000 words and the template list contains over 16,000 multi-word units.

THE LEXICON

Each item has one syntactic tag and one or more semantic tags assigned to it. At present, in cases where a word has more than one syntactic tag, it is duplicated (e.g. each syntactic tag is given a separate entry).

The semantic tags for each entry in the lexicon are arranged in approximate rank frequency order, most likely tag first, to assist in manual post editing, and to allow for gross automatic selection of the common tag, subject to weighting by domain of discourse.

THE MULTI-WORD-UNIT (MWU) LIST

Each template consists of a pattern of words and syntactic tags, some using wildcards to enable tagging with inflectional variants and less strictly defined patterns. The semantic tags for each template are arranged in rank frequency order in the same way as the lexicon. Various types of MWUs are included: phrasal verbs (e.g. stubbed out), noun phrases (e.g. riding boots), proper names (e.g. United States of America), true idioms (e.g. living the life of Riley)

THE TAGSET

The semantic tags are composed of:

1. an upper case letter indicating general discourse field.
2. a digit indicating a first subdivision of the field.
3. (optionally) a decimal point followed by a further digit to indicate a finer subdivision.
4. (optionally) one or more ‘pluses’ or ‘minuses’ to indicate a positive or negative position on a semantic scale.
5. (optionally) a slash followed by a second tag to indicate clear double membership of categories.
6. (optionally) a left square bracket followed by ‘i’ to indicate a semantic template (multi-word unit).
OTHER SYMBOLS UTILISED

%  =  rarity marker (1)
@  =  rarity marker (2)
f  =  female
m  =  male
c  =  potential antecedents of conceptual anaphors (neutral for number)
n  =  neuter
i  =  indicates a semantic idiom

Antonymity of conceptual classifications is indicated by +/- markers on tags. Comparatives and superlatives receive double and triple +/- markers respectively. Certain words and collocational units show a clear double (and in some instances, triple) membership of categories. Such cases are dealt with using slash tags, that is, all tags are indicated and separated by a slash (e.g. anti-royal = E2-/S7.1+, accountant = I2.1/S2mf, bunker = G3/H1 K5.1/W3, Admiral = G3/M4/S2mf S7.1+/S2mf, dowry = S4/I1/A9-).

The initial tagset was loosely based on Tom McArthur's Longman Lexicon of Contemporary English (McArthur, 1981) as this appeared to offer the most appropriate thesaurus type classification of word senses for this kind of analysis. We have since considerably revised the tagset in the light of practical tagging problems met in the course of the research. The revised tagset is arranged in a hierarchy with 21 major discourse fields expanding into 232 category labels. The following table shows the 21 labels at the top level of the hierarchy.
