Anne &Scope
JTET is a peer-reviewed journal, focusing on international economics, economic development and, more importantly, the interface between trade and development. The links between trade and development economics are critical at a time when both fluctuating commodity prices and trade liberalisation and agreements can radically affect the economic development countries.

JTET is designed to meet the needs of international and development economists, economic historians, applied economists and policy makers. The international experts who make up the journal’s Editorial Board encourage contributions from economists worldwide.

JTET covers:
• Theoretical and applied issues in international and development economics
• Economic applications of trade and/or development issues based on sound theoretical economic models or testing fundamental economic hypotheses
• Models of structural change
• Trade and development issues in economics of Eastern Europe, Asia and the Pacific area
• Papers on specific topics
• Review articles on important branches of the literature

Notes for Contributors
All submissions should be made online at the International Journal of Trade & Economic Development Manuscript Central site (link to http://mc.manuscriptcentral.com). New users should first create an account. Once a user is logged onto the site, submissions should be made via the Author Centre.

Submissions will be considered in two stages: initial and final. An initial submission should be complete, while in the second all document information identifying the author should be removed from files to allow them to be sent anonymously to referees. When submitting files authors will have the option to define the non-authorial version as ‘File not for review’ when submitting manuscript, please upload all of your original source files.

The authors will be informed by the journal’s editorial staff whether the manuscript will be accepted for publication. Authors should prepare and upload two versions of the manuscript:

1. The submission should include a cover page showing the author(s) name, the department where the work was done, an address for correspondence, if different, telephone numbers, email address and any acknowledgements.

2. Submissions should be in English, typed in double spacing with wide margins, one side only, of the page, preferably of A4 size. The title, but not the author’s name, should appear on the first page of the manuscript. Furthermore, in order to assist objective editors, the author should avoid any reference to him or herself which would enable identification by referees. Authors should normally be as concise as possible. The difficulty and expense involved in making amendments at the page proof stage is far greater than at the initial submission stage. As far as possible, the manuscript should therefore be submitted in its final form. Table and figures should not be inserted in the pages of the manuscript but should be sent on separate sheets. They should be numbered consecutively in Arabic numerals with a descriptive caption. The desired position in the text for each table and figure should be indicated in the margin of the manuscript. Permission to reproduce copyright material must be obtained by the authors before submission and any acknowledgement should be included in the typescript or captions as appropriate.

3. Use the Chicago Manual of Style for referencing which gives the name of the author and the date of publication as a key to the full bibliographic details which are set out in the list of references. When the author’s name is mentioned in the text, the date is inserted parenthetically immediately after the name, as in “Smith (1970).” When a less direct reference is made to one or more authors, both name and date are bracketed, with the references separated by a semicolon, as in “(several authors have noted this trend (Smith 1970, Cook 1968, Dobbs 1973)).” When the reference is to a work of deal or multiple authors, only one name of the abbreviated form as in “Smith and Dobbs (1978)” or Jones et al. (1978). If an author has two references published in the same year, add lower case letters to the year.

4. Footnotes should be used only where necessary to avoid interrupting the continuity of the text. They should be numbered consecutively using superscript Arabic numerals. They should appear at the end of the main text, immediately before the list of references.

5. Submissions should include a reference list in alphabetical order, at the end of the article. The content and format should conform to the following examples.

Book:

Article in Journal:

Edited text:

Unattributed:
When referring to material which is well known, and has been published in several places, one line of the reference can be indicated by the last few issues of the Journal.

8. On acceptance for publication, authors will be requested to provide a copy of their paper in exact accordance with the conventions listed in the preceding notes. If the final version of the paper is not submitted in accordance with these conventions then publication may be delayed by the need to return manuscripts to authors for necessary revisions. Authors should note that, following acceptance for publication, they will be required to provide not only a hard copy of the final version, but also a copy on a virus-free disk, preferably in MS-Word format or as a Latex file, if possible. Authors sending in a Latex file should also supply a pdf version. Authors will also be required to complete a Publishing Agreement form assigning copyright to the Publisher.

9. Page proofs will be sent for correction to a first-named author unless otherwise instructed by the authors before submission and any acknowledgement should be included in the typescript or captions as appropriate.

10. It is a condition of publication that authors assign copyright or license the publication rights in their articles, including abstracts, to Taylor & Francis. This enables us to ensure that authors have obtained permission to reproduce copyright material from other sources. Authors should note that, following acceptance for publication, they will be required to provide not only a hard copy of the final version, but also a copy on a virus-free disk, preferably in MS-Word format or as a Latex file, if possible. Authors sending in a Latex file should also supply a pdf version. Authors will also be required to complete a Publishing Agreement form assigning copyright to the Publisher.

Page proofs will be sent for correction to a first-named author unless otherwise instructed by the authors before submission and any acknowledgement should be included in the typescript or captions as appropriate.

11. Corresponding authors will receive free online access to their article through our website (www.tandfonline.com) and a complimentary copy of the issue containing their article to authors with any queries, please contact our reprints department at reprints@tandf.co.uk.
How much do countries trade? Who do they trade with? See global and country-level data on trade and globalization, and how this has changed over time. The integration of national economies into a global economic system has been one of the most important developments of the last century. This process of integration, often called Globalization, has materialized in a remarkable growth in trade between countries. The following chart shows the value of world exports over the period 1800-2014. International Economics and Trade is a subject that studies the reasons of international trade, international trade policy, international trade practice, international investment and international trade and economic development. International economics and trade is one of the majors of economic and trade in economics. The international economy and trade is the exchange of goods and services between countries. International economics and Capitalist economic theory holds that a completely liberalized global market is the most efficient way to foster growth, because each country specializes in producing the goods and services in which it has a comparative advantage. Yet, in practice, cutting trade barriers and opening markets do not necessarily generate development. Rich countries and large corporations dominate the global marketplace and create very unequal relations of power and information. This page provides articles, documents and reports on international trade and development. International Trade Agreements. This page provides information on international trade agreements such as NAFTA and their impact on development. Multilateral Agreement on Investment and Related Initiatives.
