International Endodontic Journal
The Official Journal of the British Endodontic Society, the European Society of Endodontology, the Flemish Society of Endodontology, the Irish Endodontic Society, the Lebanese Society of Endodontology, and the Danish Endodontic Society

Aims and Scope
The International Endodontic Journal is a leading international forum for publications in the field of Endodontology; the branch of dental sciences dealing with health, injuries to and diseases of the pulp and periradicular region, and their relationship with systemic well-being and health.

The International Endodontic Journal is published monthly and strives to publish original articles of the highest quality to disseminate scientific and clinical knowledge; all manuscripts are subjected to peer review. Original scientific articles are published in the areas of biomedical science, applied materials science, bioengineering, epidemiology and social science relevant to endodontic disease and its management, and to the restoration of root-treated teeth. In addition, review articles, reports of clinical cases, book reviews, summaries and abstracts of scientific meetings and news items are accepted.

The International Endodontic Journal is essential reading for general dental practitioners, specialist endodontists, research scientists and dental teachers.
